

Honoka Nishimura

Full-Stack Software Engineer

About me

Passionate Full-stack Developer with 1+ years of building scalable, high-performance web applications using React, Next.js, TypeScript, and PHP (Laravel). Skilled in designing and implementing databases and contributing to robust application development.

Based in Osaka and open to remote opportunities with international companies.

Eager to grow as a developer and collaborate with global teams.

Work Experience

Cherry-Pick Inc.

2024 – Present | Japan

Project 1: NTT East Japan | Full-Text Search CMS Development

Worked on a media support website for NTT East using PHP, JavaScript, and SQLite. Implemented features such as a dynamic display interface with no page transitions, AND/OR keyword search, and category-based filtering. Improved database schema to accelerate searches and enhance overall site usability.

Continued testing is conducted to cover all possible search patterns, ensuring result accuracy and consistency after implementation.

Project 2: UNIRITA Inc. | CMS Development for “Waha! Transformer”

Developed core user management features using Laravel, including list display, new user registration, CSV batch import, status tracking, and advanced search. Also responsible for creating a custom admin panel tailored to on-site workflows, featuring list filtering and bulk processing to streamline daily operations.

The new registration flow is designed to prevent workplace confusion by allowing smooth switching between bulk CSV import and manual input on screen, minimizing operational steps.

Personal Project

IKEA-style Shopping Site

2025

(React / TypeScript / JSON Server)

Development of an e-commerce prototype, from requirements gathering to UI design and feature implementation. Built key functions including user authentication, order processing, and order history using Cloudflare Functions and D1.

Handled API integration and state management, and helped design a modern frontend architecture using React, TypeScript, and Tailwind CSS with a focus on real-world usability.

Designed with state continuity and user experience in mind, ensuring smooth cart processing and persistent authentication state throughout the application.

Portfolio

📁 honoka-dvt.pages.dev

Skills

PHP

Laravel

React

TypeScript

MySQL

Tools

Cursor, VScode, Windsurf, XAMPP, Tera Term, Excel, Word, Powerpoint, Git Bash, FileZilla, PC, Mac

Language Skills

Japanese: Native

English: Fluent

TOEIC 900 | TOEFL 105

Soft Skills

Strong ability to organize and design complex specifications and translate them into functional code.

Clear communicator in team collaboration and technical discussions.

Known for delivering results even under time or information constraints.

Recognized for strong execution skills.
